Patent No. 5940400

GENERAL INFORMATION:

APPLICANT: Anderson, John P.

APPLICANT: Sinha, Sukanto

APPLICANT: Jacobson-Croak, Kirsten L.

TITLE OF INVENTION: Assays for Detecting Beta-Secretase

TITLE OF INVENTION: Inhibition

NUMBER OF SEQUENCES: 21

CORRESPONDENCE ADDRESS:

ADDRESSEE: Townsend and Townsend and Crew LLP

STREET: Two Embarcadero Ctr., 8th Floor

CITY: San Francisco

STATE: California
                                                                                                                                                                                                                                         Length 423
                                                                                                                                                                                                                                                                           4; Indels
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             E: Floppy disk

A;Notes: the authors translated the codon AAA for residue 970 as Leu
C;Comment: NCAM mediates cell-cell adhesion via homophilic binding with another NCAM mol-
C;Comment: Several forms of NCAM are produced by alternative splicing.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Algebriamily: neural cell adhesion molecule; fibronectin type III repeat homology; immuncy.
